SUMMARY

Full Stack Developer with 4+ years of experience building production web applications and serverless backends in **TypeScript, React and Node.js**. As the sole engineer of a B2B video interpretation startup, owned the entire platform end to end: 4 React applications, ~90 Cloud Functions and multi-cloud infrastructure on GCP and AWS, serving ~40 enterprise and government clients. Hands-on security experience, including leading a third-party penetration test remediation to zero critical and high findings.

EXPERIENCE

Full Stack Developer

Apr 2024 – Apr 2026

Sign Now IO – B2B video interpretation platform, 8-person startup

- **Sole technical owner**, reporting directly to the CEO. Ramped up on a large existing codebase and an unfamiliar stack (Firebase, GCP, AWS) with minimal handover, then took full ownership of production while continuing to ship new features.
- Platform served **~40 business clients**, including Harel Insurance, Partner, Yes and the Ministry of Health, handling **~1,000 video calls and ~7,500 call minutes per month** at **99.9% measured uptime**.
- Built **4 React + TypeScript applications** from scratch: the core video interpretation app, an admin panel, a B2C payment portal for purchasing interpretation minutes by credit card, and the marketing site.
- Designed a serverless backend of **~90 Firebase Cloud Functions** (callable, HTTP, Firestore triggers and scheduled jobs) covering credit card payment processing, video call data processing, and automated rotation of API keys and access tokens.
- Built a **secure data pipeline** to a third-party vault over SSH/SFTP, and moved all credentials into **GCP and AWS Secret Managers**.
- Led remediation of a **third-party penetration test** in ~1 month: resolved the critical and all 5 high findings, and reduced medium findings from 8 to 2 and low from 4 to 1.
- Set up **CI/CD with GitHub Actions** for automated deployments and unit test runs.
- Automated call analytics with the **Twilio** API (duration, answered and cancelled calls), replacing manual calculation, and built **n8n** workflows for payment confirmations and scheduled-call reminders.

Full Stack Developer

2022 – 2024

Israeli Air Force – Military service

- Built and maintained a full stack application in **React, TypeScript and Node.js** used by several hundred users, as one of a 3-developer team.
- Took hands-on responsibility for **system architecture, database design** and the team's **Git workflow**.
- Learned the internals of complex military communication networks to integrate new software into existing infrastructure.

SKILLS

Programming: TypeScript, JavaScript, Python, Dart

Frontend: React, Tailwind CSS, HTML/CSS, Flutter

Backend: Node.js, RESTful APIs, Firebase (Firestore, Cloud Functions, Auth, Storage), PostgreSQL

Cloud & DevOps: GCP (IAM, Cloud Scheduler, Cloud Tasks, Secret Manager), AWS (Lambda, Amplify, Secrets Manager), GitHub Actions, CI/CD, Git

Integrations & Security: Twilio, n8n, payment processing, SSH/SFTP, secrets management, penetration test remediation

AI Tools: Claude Code, GitHub Copilot

Spoken Languages: Hebrew (native), English (fluent)

EDUCATION

Practical Engineer, Software Engineering

2022

The Multidisciplinary College Amal B
